

FOR IMMEDIATE RELEASE

NATIONAL GRID SELECTS DUOS TECHNOLOGIES TO SECURE NORTHEAST POWER STATION

Virtual Perimeter System is Based on Intelligent Video Technology

JACKSONVILLE, FL, June 13, 2008 – As part of an ongoing effort to protect the nation’s energy supply, National Grid/Keyspan, the nation’s second largest energy provider, has awarded Duos Technologies, Inc. a contract to secure a vital power station in the northeastern U.S.

Duos will deploy its **PRAESIDIUM**® intelligent video and sensor platform to create a virtual security perimeter that encircles the power station property. The virtual perimeter detects intruders, evaluates the threat, and alerts National Grid security personnel for a rapid and informed response. Based on Duos’ proprietary technology, the system can simultaneously detect and process multiple security events and present the information to users in an intuitive display that will be monitored by both on-site and remote command center operators.

This award represents the latest in a series of National Grid/Keyspan awards to Duos and underscores its commitment to Duos’ advanced technology to safeguard its critical assets and infrastructure. It builds on a successful Duos system implementation that is operational at another National Grid location.

“We are pleased that National Grid’s positive experience with Duos has led to this additional system deployment,” said Gianni Arcaini, Chairman and CEO of Duos. “We are committed to meeting our clients’ goals effectively and efficiently and we are gratified that we have earned the trust of this distinguished organization.”

Duos Technologies Inc., headquartered in Jacksonville, Florida, provides a broad range of sophisticated technology solutions with an emphasis on Homeland Security. Cybrinth, Inc. (Washington, D.C.) is the company’s logic security division. Duos’ systems are based on its proprietary object detection and behavioral analysis software, managed by the company’s multi-layer control platform, allowing seamless integration of a myriad of sensing technologies into a unified command and control interface. Its comprehensive automated systems also play a meaningful role in the transportation, petrochemical, and healthcare industries. **Duos Technologies International, Inc.**, is its global arm.
