Dramatic Growth in US Public Transit Ridership Prompts Congressional Spending

Duos Technologies Positioned to Benefit from Increased Rail Spending

JACKSONVILLE FL, September 30, 2008 – Duos Technologies Inc., a leading provider of intelligent video and operational systems for commuter and transportation rail markets, cites passage by the US Senate of the Railroad Safety Improvement Act, which includes \$2 Billion in funding for railroad safety improvements. Meanwhile, soaring gas prices contributed to an average 5% rise in U.S. public transit ridership in Q2 2008 over the comparable 2007 period, following a 10% increase in Q1, according to a recent report by the American Public Transportation Association.

“We believe the combination of increased ridership coupled with legislative spending is a key trend indicator and a market segment driver for Duos’ intelligent surveillance and operational solutions,” states Duos Technologies CEO, Gianni Arcaini. “Increased ridership will drive the expansion of existing infrastructure and programs to enhance both rider security and operational efficiency. As more passengers crowd onto public transit, we see a growing market potential for automated surveillance that alerts law enforcement when a potential threat to their system or ridership is detected. Duos’ intelligent video and sensor systems not only allow transit providers to effectively monitor large surveillance networks, but also yield operational improvements that can boost safety and reduce cost.”

In the past year alone, Duos has won over \$7 million in contracts from Class I rail providers to establish or expand projects securing railroad transportation and increasing operational efficiency. These projects include a broad range of Duos’ intelligent video and sensor surveillance solutions currently deployed at bridges, tunnels, and rail yards nationwide as well as the National Capital Region Rail Pilot Project/Amtrak Security Pilot Project (NCRPP/ASPP), which secures a vital rail corridor running through downtown Washington, DC.

Duos Technologies Inc., headquartered in Jacksonville, Florida, provides a broad range of technology solutions with an emphasis on Homeland Security. Its systems are based on its proprietary object detection and behavioral analysis software, managed by the company’s multi-layer control platform. This allows seamless integration of a myriad of sensing technologies into a unified command and control interface. Duos’ comprehensive automated systems play a meaningful role in the transportation, petrochemical, and healthcare industries.
