Duos Technologies Releases Second Generation Integrated Smart Command and Control Platform **centraco™**

Unified Information Delivery and Response Solution Addresses Security & Operational Management Challenges

JACKSONVILLE FL, January 28, 2009 – Duos Technologies, Inc. announces the release of **centraco™**, the Company's second-generation intelligent command and control platform that consolidates multisource data and alarm events into a single interface to empower security and operational decision makers.

centraco™ represents the next generation of innovation in open source information delivery and response solutions. It is designed to receive digital and analog inputs, alarm events, and situational data from a wide array of third-party systems such as building management, security, video, and access control systems. The cornerstone of **centraco™** functionality is its ability to instantly interpret, collate, and disperse data between systems while displaying pertinent information and events in a multi-layered navigation scheme. This provides users with synchronized geospatial awareness, multiple target event representations, and graphical bookmarks of live and recorded event data. The graphical user interface is available in a standard 2D version or in combination with **3DiS™**, the company's innovative enhanced three-dimensional immersive graphical representation.

Built around a customer's concept of operations, **centraco™** encompasses the latest in investigative analysis tools including embedded trend monitoring, event fusion, and custom filtering capabilities that are augmented if used in combination with **praesidium®**, Duos' proven intelligent video analytics platform.

"While there are many approaches to consolidating multipoint sensor input, we developed the **centraco™** platform to address our customers' need to streamline information from multiple non-homogenous and ever-expanding systems into a single comprehensive interface," said Gianni B. Arcaini, Chairman and CEO of Duos. "The quality and effectiveness of security or operational decisions hinge upon the quality and speed of information presented to the operator. Mission-critical information must be presented in a crisp and focused way, and **centraco™** meets and exceeds these requirements."

Duos Technologies Inc., headquartered in Jacksonville, Florida, provides a broad range of sophisticated technology solutions with an emphasis on Homeland Security. Its systems are based on its proprietary object detection and behavioral analysis software, managed by the company's multi-layer control platform that allows seamless integration of a myriad of sensing technologies into a unified command and control interface. Its comprehensive automated systems also play a meaningful role in the transportation, petrochemical, healthcare, and critical infrastructure sectors.
