

Duos Technologies Receives Certification of SAFETY Act Designation from the U.S. Department of Homeland Security

DHS Designation for **praesidium**® Provides Important Liability Protections To Duos Customers

JACKSONVILLE, FL, September 1, 2010 – Duos Technologies, Inc. announces today that its **praesidium**® technology has earned SAFETY Act Designation from the U.S. Department of Homeland Security (DHS).

The SAFETY Act was enacted by the U.S. Congress in 2002 and provides important legal liability protections for providers of Qualified Anti-Terrorism Technologies and their customers. The Act was intended to encourage the development and deployment of innovative anti-terrorism products and services and its protections extend to Duos' customers.

The SAFETY Act Designation for **praesidium**® is retroactive to 2004, when Duos first deployed this technology.

To achieve SAFETY Act Designation, Duos had to demonstrate that **praesidium**® has the capacity to deter, defend against, identify, respond to, or mitigate an act of terrorism. Duos passed a rigorous review by the U.S. Department of Homeland Security to earn the Designation.

praesidium® is a browser-based sensor detection software suite that processes and analyzes incoming video feeds, using algorithms to detect activities and events. **praesidium**® can be customized to the individual customer's needs and concept of operations. The system is particularly suited for buffer zone protection in challenging environments such as railroad infrastructure, gas, oil, and chemical plants, utilities and projects requiring complex virtual fencing. Key activities detected by **praesidium**® include perimeter violation, wrong-way movement, loitering activity, objects that are removed or left behind, and traffic congestion. The software will also detect, tag, and automatically track people or objects within an area of interest and classify objects by size, direction, and speed.

Gianni Arcaini, Chairman and CEO of Duos Technologies said, "The SAFETY Act Designation contributes significant value to **praesidium**® and, more importantly, to our customers as it adds a layer of liability protection in the event of an act of terrorism. This Designation will allow current and future Duos' customers to reap the benefits of our innovative technology while maintaining confidence in their investments."

Duos Technologies Inc., headquartered in Jacksonville, Florida, provides a broad range of technology solutions with an emphasis on Homeland Security. Its systems are based on its proprietary object detection and behavioral analysis software, managed by the company's multi-layer control platform. This allows seamless integration of a myriad of sensing technologies into a unified command and control interface. Its comprehensive automated systems play a meaningful role in the transportation, petrochemical, and healthcare industries.
