

## FOR IMMEDIATE RELEASE

### Los Angeles Metro Selects Duos as its Video Analytics Platform

**JACKSONVILLE, FL/Los Angeles, CA** – Los Angeles County Metropolitan Transportation Authority (Metro) selected Duos Technologies' **praesidium**® analytics suite as its video analytics platform. With a service area of 1,433 square miles and a target market of 9.6 million people, LA Metro provides transit services to one of the country's largest and most populous counties.

Following the October 21, 2010 recommendation of its Operations Committee, LA Metro awarded JM Fiber Optics a 60 month IDIQ (indefinite delivery, indefinite quantity) contract, valued in excess of \$20 million, to provide a major upgrade to its communications, CCTV, public address and wayside intrusion detection systems as well as other support services.

The security components of this multi year project will be deployed in partnership with TransitVue, a subsidiary of JM Fiber Optics, and Duos Technologies. Duos will provide the analytics backbone to the planned intelligent systems, designed to add automated security from unauthorized intrusions in select areas of Metro's tracks, station platforms, fenced areas, tunnels, and bridges. Intrusions, such as suicide attempts and terrorist attacks, will be detected instantly and zone intrusion alerts are reported to designated personnel. The selected employees can then determine the threat level and respond accordingly; for instance, by either stopping the train or evacuating the station.

"We are excited to welcome LA Metro to our growing family of rail customers. TransitVue and Duos Technologies intend to jointly develop a standard in smart transit security, including all aspects of communication and security to help authorities in the selection of a fully integrated and cohesive system", said Gianni Arcaini, Chairman and CEO of Duos Technologies.
