

FOR IMMEDIATE RELEASE

DUOS TECHNOLOGIES WINS MAJOR RAIL SECURITY CORRIDOR CONTRACT

JACKSONVILLE, FL, November 8, 2011 – Duos Technologies, Inc. (Duos), an industry leader in digital video surveillance and analytics, announced today that it has been awarded a contract in excess of \$680,000, to implement its intelligent video security solutions at a sensitive, major rail section in Indianapolis, IN.

The project is part of a larger security effort to harden critical infrastructure in and around the City of Indianapolis, who will host the 2012 Super Bowl. The City will be the focal point for the estimated 150,000 visitors expected to travel to Indianapolis for the February 5th event, which will be viewed world-wide. The award is the latest in a series of strategic contracts as the major U.S. rail lines have increasingly turned to Duos for customized security solutions.

The project will combine several of Duos' advanced technologies to provide local law enforcement and rail security personnel with the ability to monitor a wide area from a remote command center. Suspicious activities will be automatically detected and simultaneously reported by the system's multi layered alarm management engine.

"We have the ability to adapt our technology, our processes, and our delivery to meet challenging customer needs, and this is the hallmark of our company's success," stated Gianni Arcaini, Chairman and CEO of Duos. "Our solution was developed specifically for the rail sector and addresses specific needs of critical infrastructure protection, rather than simply deploying a general vigilance approach."

Duos Technologies Inc., headquartered in Jacksonville, Florida, provides a broad range of sophisticated technology solutions with an emphasis on Homeland Security. Its systems are based on its proprietary object detection and behavioral analysis software, managed by the company's multi-layer control platform, allowing seamless integration of a myriad of sensing technologies into a unified command and control interface. Its comprehensive automated systems also play a meaningful role in the transportation, petrochemical, and healthcare industries. Due to the nature of its systems and customer confidentiality, Duos has elected to omit sensitive material including specifics on location and technology from this press release.
