

FOR IMMEDIATE RELEASE

BAPTIST HEALTH ENTERPRISES SELECTS DUOS TECHNOLOGIES TO MOVE INTO INTELLIGENT VIDEO

DuosTech will deploy its new generation of Intelligent Sensor Platform region wide

JACKSONVILLE, FL, February 7, 2008 – Baptist Health Enterprises, part of Baptist Health South Florida, the largest not-for-profit healthcare provider in Florida, has awarded Duos Technologies, Inc. a contract for a substantial technical upgrade to their region-wide security and surveillance system.

Baptist Health Enterprises has deployed over forty of Duos' digital video surveillance systems at its various facilities in an ongoing project. These systems provide a critical means of securing the organization's premises and real estate holdings, as well as protecting patients, staff, and the general public. Under this contract, Duos will upgrade all of the institution's installed surveillance systems to its next generation Praesidium® based intelligent software technology, enabling the introduction of advanced security features and video analytics applications. This award complements the healthcare provider's recent commissioning and operational deployment of a custom, Duos-designed command and control center to manage all of its security installations from a centralized location.

"We are gratified by this meaningful commitment from the Baptist Health Enterprises organization, demonstrating their continued confidence in our company, our systems, and, most important, our people," said Gianni Arcaini, Chairman and CEO of Duos. "This contract positions these facilities to reap the benefits of the next generation of intelligent technologies in infrastructure security and sets the standard for all future installations."

Duos Technologies Inc., headquartered in Jacksonville, Florida, provides a broad range of sophisticated technology solutions with an emphasis on Homeland Security. Cybrinth, Inc. (Washington, D.C.) is the company's logic security division. Duos' systems are based on its proprietary object detection and behavioral analysis software, managed by the company's multi-layer control platform, allowing seamless integration of a myriad of sensing technologies into a unified command and control interface. Its comprehensive automated systems also play a meaningful role in the transportation, petrochemical, and healthcare industries.
