Union Pacific Railroad selects Duos Technologies, Inc. to provide high-tech Homeland Security solutions for the protection of critical railroad infrastructure

Jacksonville, FL (November 30, 2005)- Duos Technologies, Inc. announces the signing of a master agreement with Union Pacific Railroad (UP) to provide high-tech Homeland Security solutions for the protection of critical railroad infrastructure. The master agreement orders the design, manufacture, and installation of various state-of-the-art, application specific surveillance and monitoring systems at sensitive points along the UP grid. Duos Technologies, Inc. has completed numerous DHS buffer zone surveillance systems projects for U.S. rail lines.

Mr. Dennis L. Jenson, Chief of Police – Union Pacific Railroad), says,

"UP is intent upon mitigating the negative impact threats and security breaches have on the success of its Unified Plan effort to match demand and capacity. A key factor is the elimination of bottlenecks that impact train velocity and therefore productivity. We are excited about the opportunity to integrate cutting edge technology into a system that will allow law enforcement, and railroad personnel to simultaneously monitor critical stretches of rail line and other assets for suspicious and threatening activity in real time, both remotely and from central command and control stations. We anticipate that Duos' systems will become one of the cornerstones of our overall railroad security infrastructure, helping us enhance safety and security along UP rail lines across the country, especially considering that Just-In-Time (JIT) delivery is mission critical to support American manufacturing initiatives. It also provides an opportunity for us to continue to support DHS initiatives to harden elements of our nation's critical infrastructure against terrorist attack."

About Duos Technologies

Since 1990, Duos has specialized in automated systems with an emphasis on sensor based geospatially driven intelligent digital video, stand-alone and system-wide automated processes, instrumentation and control systems, information technology, and engineering services. Via the convergence of these disciplines, Duos provides customized integrated systems for business and government requirements, including critical Homeland Security applications. Visit the Duos web site at www.duostechnologies.com for more about our services.

About Union Pacific Railroad

With 33,000 route miles and over 7,000 locomotives, Union Pacific Railroad is the largest railroad in North America. Operating in the western two-thirds of the United States, the railroad serves 23 states, linking every major West Coast and Gulf Coast port and provides service to the east through its four major gateways in Chicago, St. Louis, Memphis and New Orleans. Additionally, Union Pacific operates key north/south corridors and is the only railroad to serve all six gateways to Mexico, and interchanges traffic with the Canadian rail systems. Union Pacific has one of the most diversified commodity mixes in the industry, including

chemicals, coal, food and food products, forest products, grain and grain products, intermodal, metals and minerals, and automobiles and parts.
