Duos Awarded Contract to Protect High Traffic Public Access Area of Major Medical Facility

Deploys Intelligent Video Platform in a Continuing Program to Boost Personal and Asset Security

JACKSONVILLE, FL, May 15, 2008 – Baptist Health, the largest not-for-profit healthcare provider in south Florida, has awarded a substantial contract to Duos Technologies, Inc. to deploy an intelligent video surveillance system in a high traffic public access area of one of its largest medical facilities.

The deployed system will combine traditional surveillance devices and an existing infrastructure security system based on Duos' current generation of the **PRAESIDIUM**[®] intelligent video platform to secure a high-risk area of the hospital campus. This system will meet Baptist Health's goal of ensuring the protection of physical and personal assets, and the safety of patients and visitors. Implementation of the project is a continuation of Baptist Health's transition to video analytics as a tool to achieve the hospitals safety and security objectives and will be a model for similar systems at other Baptist facilities.

This contract builds on an established relationship between Duos and Baptist Health and is part of the healthcare provider's commitment to Duos' intelligent security technology. Duos' systems enable the introduction of advanced video analytics features that improve public safety while streamlining security operations.

"We are proud and appreciate our partnership with Baptist Health of South Florida. We are very pleased with their continued trust in our systems and our people," said Gianni Arcaini, Chairman and CEO of Duos. "The satisfaction of our customers is our most important measurement of business success."

Duos Technologies Inc., headquartered in Jacksonville, Florida, provides a broad range of sophisticated technology solutions with an emphasis on Homeland Security. Cybrinth, Inc. (Washington, D.C.) is the company's logic security division. Duos' systems are based on its proprietary object detection and behavioral analysis software, managed by the company's multi-layer control platform, allowing seamless integration of a myriad of sensing technologies into a unified command and control interface. Its comprehensive automated systems also play a meaningful role in the transportation, petrochemical, and healthcare industries.
