Airport Traffic Exit Control Detection Suite

The TSA stations security personnel at concourse exits to catch people going the wrong way to avoid security checkpoints. Considering the volume of traffic at these locations, distractions, boredom and long hours can cause slip-ups. Now that the responsibility for concourse exit security is shifting to the airports, everyone is looking for a reliable, low-cost solution. And just in time, here it is.

The Duos Technologies, Inc. intelligent **Airport Traffic Exit Control Detection Suite (atec®)** identifies, monitors, and records people and objects moving against the flow in the exit lanes of an airport concourse. Using audible and visual alarms, **atec®** immediately alerts airport security personnel of any breach.

atec® is a simple, reliable, localized, self contained infrastructure with options. **atec®** is extraordinarily cost effective .

With the addition of our **“Tag and Track”** option, operators can actually “fly” into a computer generated 3D (replay) model of the concourse and track the target person or object from the moment of entry into the checkpoint to the current (i.e. live) position of the target object.

atec® allows both real-time local and remote monitoring using a customized browser-based user interface. From simple installations to highly complex site setups, the **atec®** provides the most advanced, accurate, and flexible airport traffic exit control available in the marketplace today.

FEATURES and BENEFITS:

- Detects people entering an airport concourse exit
- Detects objects thrown into an airport concourse exit
- Audible and visual alarms alert security personnel and warn intruder
- Digitally records the breach and immediately plays it back
- Non intrusive, simple and modular
- One day installation requires only a power source and network cable
- TSA validated as a viable, proven technology for this application
- Highly accurate and reliable
- Extremely low false alarm rate
- Open architecture, scalable solution
- Successfully deployed at a major airport
- Alarming can be distributive with images of the event to any connected network system including workstations, laptops, PDAs, Blackberries, and cell phones
- Systems can include audible announcements, strobes, or any other required deterrent devices

With **centraco™** Command and Control

Like all of Duos' intelligent solutions, **atec®** is command and control ready. Duos' state-of-the-art intelligent command and control platform, **centraco™** provides a scalable information delivery and response solution that is designed to address operational and management challenges. Designed with years of “real life” situational input, the **centraco™** platform is designed to perform in the most challenging and dynamic environments.
