

TrueVue 360™

duostech is a premier provider of data center asset inventory and audit services. TrueVue 360™ technology is the state-of-the-art cornerstone of our services. An enterprise system that utilizes barcode scanning technology, TrueVue 360™ quickly and seamlessly provides accurate, catalogued results for data center asset inventory and audit services.

TrueVue 360™ highlights:

- **Android Mobile Platform** – The TrueVue 360™ utilizes an Android Mobile Platform that sends and receives data via Bluetooth to the local hub. Each Android handheld is managed by a data collector with their own Login identity. The handhelds use a built-in database to store device specifications and collected or audited data.
- **Laptop Hub** – Handheld data is submitted to a laptop, which serves as the local hub. As collection progresses the hub provides the latest and greatest information to each registered handheld. The hub has detailed information about the location and current state of the audit project.
- **Projects Stored in the Cloud** – The local hubs submit finalized audited data to a central server that collects all project data for access from any web browser with a secure connection to the Internet. The central server is accessed utilizing the same user interface as the local hub.
- **Accurate IT Asset Inventory** – TrueVue 360™ provides accurate IT asset inventory, critical for a reliable baseline for capacity planning and asset inventory control. It also makes regulatory compliance, like Sarbanes-Oxley, HIPPA, etc., simple and stress-free.

Data Collection Services & Consulting

Duos Technologies Inc. provides a broad range of sophisticated and intelligent technology solutions with an emphasis on mission critical applications. We combine an innovative business philosophy with a focus on customer service.

The IT Infrastructure Services group is a division of Duos Technologies, Inc. dedicated to providing resources, services and support to data centers and enterprise organizations.
